COMMONLY ASKED QUESTIONS ......................................................................... 14
TIPS FROM YOUR DIETITIAN .............................................................................. 15
When you start dialysis, the foods you eat may need changing. This will depend on your appetite, your usual foods, and your blood work. This handout provides guidelines to help you make healthy food choices. Your dietitian will work with you to make the guidelines fit with your daily food intake.

Why do I need to follow a special diet?

1. Eating well makes you feel better and keeps you healthy.
2. Dialysis helps remove waste products and fluids from your body. By watching what you eat, you will have fewer waste products.

What will my diet look like?

Depending on your blood test results, you may need to eat less:

- Phosphorus, sodium and fluids

And you may need to eat more:

- Potassium and protein

Your dietitian will discuss this with you.
PROTEIN
Do I need more protein?

During dialysis you lose some protein. You may need to replace this by eating more protein. Your dietitian will discuss your needs with you.

What foods are high in protein?

Fish, chicken, turkey, beef, pork and eggs are good sources of protein. Some higher phosphorus foods such as milk, yogurt, cheese, dried beans, legumes and nuts are also high in protein. These foods can usually be eaten in limited amounts (see phosphorus information).

If you are vegetarian, your Dietitian will advise you on good protein sources and portion sizes.

How much protein should I eat?
You need __________ounces of protein foods each day.

Here is a guide for protein foods sizes:

<table>
<thead>
<tr>
<th>Protein foods</th>
<th>Ounces of protein</th>
</tr>
</thead>
<tbody>
<tr>
<td>Whole egg</td>
<td>1</td>
</tr>
<tr>
<td>2 egg whites</td>
<td>1</td>
</tr>
<tr>
<td>¼ cup liquid egg substitute</td>
<td>1</td>
</tr>
<tr>
<td>4 medium cooked shrimp</td>
<td>1</td>
</tr>
<tr>
<td>¼ cup canned salmon or tuna</td>
<td>1</td>
</tr>
<tr>
<td>1 cooked pork chop</td>
<td>3-5</td>
</tr>
<tr>
<td>1 cooked hamburger patty</td>
<td>3-5</td>
</tr>
<tr>
<td>1 cooked chicken leg (drum + thigh)</td>
<td>3-5</td>
</tr>
<tr>
<td>1 chicken breast</td>
<td>3-5</td>
</tr>
<tr>
<td>¾ cup tofu (firm)</td>
<td>3</td>
</tr>
</tbody>
</table>

*3 oz. of cooked protein or meat is the size of a deck of cards. Protein shrinks when cooked. 4 oz. raw equals 3 oz. cooked.
PHOSPHORUS

What is phosphorus?

Phosphorus is a mineral. It works with calcium to keep your bones and teeth strong.

Why do I need to limit phosphorus?

High phosphorus may cause:
• Itchy skin
• Weak and easily broken bones
• Bone pain or painful lumps in your joints
• Hardening of your blood vessels

How can I control my phosphorus?

• Diet
• Phosphorus binders
• Dialysis

What foods are high in phosphorus?

Most foods have phosphorus but some foods have more than others.

1) Naturally occurring phosphorus: Dairy products, dried beans, peanut butter, nuts and seeds and high fiber grains.

2) Added sources of phosphorus: cola beverages, crystal type drinks, baking mixes, non-dairy creamers, processed and marinated meats, and others.

Learn to read food labels. Phosphorus additives can be identified by the term “PHOSPH” as part of the word. Phosphorus additives are not listed in the NUTRITION FACTS table. They are only listed in the INGREDIENTS. Manufacturers can change the ingredients at any time, so it is important to check labels frequently.

How can I eat less phosphorus?

Limit to _________serving(s) high phosphorus food per day.
Here is a guide for high phosphorus foods and serving sizes:

<table>
<thead>
<tr>
<th>High Phosphorus Foods</th>
<th>Serving Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cow’s milk</td>
<td>½ cup</td>
</tr>
<tr>
<td>Soy milk</td>
<td>¾ cup</td>
</tr>
<tr>
<td>Chocolate milk / hot chocolate</td>
<td>½ cup</td>
</tr>
<tr>
<td>Yogurt (plain or fruit)</td>
<td>½ cup</td>
</tr>
<tr>
<td>Cheese (cheddar, mozzarella)</td>
<td>1 ounce (1 inch cube)</td>
</tr>
<tr>
<td>Cottage cheese</td>
<td>1/3 cup</td>
</tr>
<tr>
<td>Ice cream</td>
<td>¾ cup</td>
</tr>
<tr>
<td>Pudding or custard</td>
<td>½ cup</td>
</tr>
<tr>
<td>Pizza (cheese or vegetarian)</td>
<td>½ of 1 medium slice</td>
</tr>
<tr>
<td>Dried beans (kidney, white, garbanzo)</td>
<td>½ cup</td>
</tr>
<tr>
<td>Nuts</td>
<td>3 tbsp</td>
</tr>
<tr>
<td>Peanut butter and other nut butters</td>
<td>2 tbsp</td>
</tr>
<tr>
<td>Sunflower seeds</td>
<td>2 tbsp</td>
</tr>
<tr>
<td>Pumpkin seeds</td>
<td>1 tbsp</td>
</tr>
<tr>
<td>Bran Flakes</td>
<td>2/3 cup</td>
</tr>
<tr>
<td>All Bran® cereal</td>
<td>¼ cup</td>
</tr>
<tr>
<td>Bran muffin</td>
<td>1 medium</td>
</tr>
<tr>
<td>Commercial waffles and pancakes</td>
<td>1</td>
</tr>
<tr>
<td>Sardines</td>
<td>2</td>
</tr>
<tr>
<td>Liver and organ meats</td>
<td>1 ounce</td>
</tr>
</tbody>
</table>

These high phosphorus foods contain between 100 and 140 mg of phosphorus per serving.
### Tips To Lower The Phosphorus In Your Diet

<table>
<thead>
<tr>
<th>Instead of these High Phosphorus Foods:</th>
<th>Choose these Low Phosphorus Foods:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Milk or soy milk</td>
<td>Rice milk such as Rice Dream™ (original or vanilla, non-enriched)</td>
</tr>
<tr>
<td>Yogurt or ice cream</td>
<td>Sherbet, sorbet or *Jello®, Rice Dream™ Non-Dairy Dessert</td>
</tr>
<tr>
<td>Instant pudding or custard</td>
<td>Homemade pudding or custard made with Rice Dream™ (original or vanilla, non-enriched)</td>
</tr>
<tr>
<td>Hard cheeses (cheddar, mozzarella) or processed cheese (Cheez Whiz™, Velveeta™) or light cream cheese</td>
<td>Soft cheeses: brie, camembert, goat (soft), ricotta, neufchatel, regular cream cheese</td>
</tr>
<tr>
<td>Processed and marinated meats (hot dogs, sandwich meat, frozen chicken breast)</td>
<td>Fresh chicken breasts, egg, canned fish, freshly cooked meat and poultry</td>
</tr>
<tr>
<td>Macaroni and cheese</td>
<td>Noodles with margarine, garlic and basil</td>
</tr>
<tr>
<td>Peanut butter or nut butters</td>
<td>Honey, jelly or jam</td>
</tr>
<tr>
<td>Nuts and seeds</td>
<td>Unsalted popcorn, unsalted pretzels</td>
</tr>
<tr>
<td>Multigrain, dark rye, pumpernickel breads</td>
<td>White, Italian, French, 60-100% whole wheat, or light rye breads</td>
</tr>
<tr>
<td>Bran cereal</td>
<td>Corn Flakes®, Corn Bran®, Rice Krispies®, Special K®, puffed wheat or rice, Rice Chex®</td>
</tr>
<tr>
<td>Chocolate, chocolate bars, caramels</td>
<td>Jelly beans, gum drops, *marshmallows or clear hard candies</td>
</tr>
<tr>
<td>Coke™, Pepsi™ and other drinks containing phosphorus additives</td>
<td>Ginger ale, lemon-lime, grape, or orange sodas, *root beer</td>
</tr>
</tbody>
</table>

- *Check food labels for ingredients containing PHOSPH, as some brands may contain phosphorus additives.
- If you have diabetes, choose “diet” alternatives (example, diet jam, diet soda).
What are phosphorus binders?

Phosphorus binders are medications that help lower phosphorus in your body. The phosphorus binder works in the stomach by attaching to the phosphorus from food, so it does not get absorbed into the blood.

Types of Phosphorus binders:
• calcium carbonate (TUMS®/Apo-Cal®)
• calcium acetate
• sevelamer hydrochloride (Renagel®)
• lanthanum carbonate (Fosrenol®)

Phosphorus binders should be taken just before your first bite of food. Carry your phosphorus binders with you and remember to take them when you eat out.

People with kidney disease must not eat Starfruit. Starfruit contains a toxin that causes confusion, seizures, hiccups, insomnia and even death.
SODIUM

What is sodium?

Sodium is a mineral found in most foods and in all types of salt. Sodium is important for water balance in the body.

Why Do I Need to Limit Sodium?

With kidney disease your body may not balance sodium and water very well. If you eat too much sodium you may have:

• High blood pressure
• Thirst
• Puffy hands, face and feet
• Fluid in the lungs, making it hard to breathe
• Extra work for your heart
• Rapid weight gain
• Need to use higher strength PD solution to remove excess fluid

How Can I Eat Less Sodium?

• Do not add salt to your food.
• Do not add salt in your cooking.
• Use fresh or frozen (without salt) meats, poultry, fish, seafood, eggs, vegetables and fruits. These are naturally low in sodium.
• Try making your meals with fresh ingredients.
• Avoid using high sodium packaged or processed foods such as:
  • Ham, bacon, salami, and other deli meats
  • Pickles, olives, relish
  • Teriyaki, fish or soya sauces
  • Canned or packaged soups
  • Seasoned packaged or instant rice/noodles
  • Bouillon cubes (OXO®, Bovril®), Marmite®, Veg-mite®
  • Salted snack foods (chips, pretzels, nuts, crackers)
• Read food labels. Avoid foods with sodium or salt listed as one of the first five ingredients.
• Cook with herbs and spices instead of salt.
• Cook at home more often. Restaurant meals are higher in sodium than home cooked meals.

**Can I use Salt Substitutes?**

Salt substitutes such as Co-salt™, Nu-salt™, No-salt® or Half-Salt™ are very high in potassium and can be dangerous for people with kidney disease. Talk your dietitian if you are using them.

**How Do I Make My Foods Tasty Without Adding Salt?**

Giving up salt does not mean giving up flavour. Learn to season your food with:
• Herbs and spices
• Garlic and onions
• Unsalted seasoning mixes such as Mrs. Dash® and McCormick® salt-free
• Dried mustard
• Vinegar
• Lemon and lime juice

There are many recipes and cookbooks for low sodium foods. Ask your dietitian.
FLUID

Why do I need to limit my fluid intake?

Peritoneal dialysis removes fluid from you each day.

Too much fluid can cause:

- Quick weight gain (this is fluid weight, not muscle or fat).
- High blood pressure
- Fluid in the lungs, making it hard to breathe
- Puffy hands, face and feet
- Extra work for your heart which can lead to heart failure
- Need to use higher strength PD solutions to remove excess fluid

Too little fluid can cause:

- Fast weight loss (quick weight loss is fluid weight, not muscle or fat)
- Low blood pressure
- Feeling dizzy or weak
- Feeling faint when standing
- Leg cramps

How much fluid you drink is an important part of your dialysis plan.

How much fluid can I drink?

Most people on peritoneal dialysis can drink 6-8 cups of fluid a day if they have some urine output and are limiting their salt intake.

Up to a total of _________ cups of fluid each day.
(1 cup = 8 fluid ounces = 250 mL)

The amount you can drink will depend on how much urine you make.
**What counts as fluid?**

If the food can melt or turn to liquid at room temperature, you need to count it as part of your daily fluid intake.

**Fluids to Count:**

- Water
- Ice
- Tea/coffee
- Milk
- Juice
- Soups
- Soda pop
- Alcoholic beverages
- Ice-cream/sherbet/sorbet
- Jell-O®
- Popsicle /frozen drinks
- Nutritional supplements such as Ensure®, Glucerna® and Nepro®
POTASSIUM

What is potassium?

Potassium is a mineral found in most foods. In your body, it helps your nerves, muscles and heart to work properly.

Most people on peritoneal dialysis need a high potassium diet.

How many high potassium foods can I eat?

You can start by eating up to ________ servings of high potassium foods per day.

High potassium foods:

<table>
<thead>
<tr>
<th>Fruits</th>
<th>Vegetables</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bananas</td>
<td>Potatoes</td>
</tr>
<tr>
<td>Oranges or orange juice</td>
<td>Sweet potatoes / yams</td>
</tr>
<tr>
<td>Cantaloupe or honeydew</td>
<td>Dark leafy greens: spinach, Swiss chard, beet greens, Kale</td>
</tr>
<tr>
<td>Kiwi fruit</td>
<td>Tomato sauce / paste</td>
</tr>
<tr>
<td>Pomegranate</td>
<td>Low Sodium Tomato juice / V-8®</td>
</tr>
<tr>
<td>Dried fruit: dates, prunes, raisins</td>
<td>Medium fresh tomato</td>
</tr>
<tr>
<td>Mango or papaya</td>
<td>Avocado</td>
</tr>
</tbody>
</table>

For a more detailed potassium list, please ask your Dietitian.
PUTTING IT ALL TOGETHER

For each meal include something from these food groups:

1. **Protein foods** such as fish, poultry, meat and egg or egg substitute
2. **Starchy foods** such as bread, cereal, rice, noodles
3. **Fruits and/or vegetables**

Limit sodium, fluids, and high-phosphorus foods as advised by your dietitian.

Each peritoneal dialysis patient’s diet will be different depending on his or her blood test results. Your dietitian will review your results and make suggestions if needed. Your diet may change over time.
OTHER COMMONLY ASKED QUESTIONS:

Should I take a vitamin supplement?
Renavite is a vitamin B complex with vitamin C, which will be provided for you. Over the counter vitamin and mineral supplements are not recommended unless advised by your doctor or dietitian. Herbal remedies can also be harmful, so please check with your dietitian or renal pharmacist prior to taking any herbal products.

Why am I not hungry?
There are many reasons why you may not be hungry. If you are losing weight, talk to your dietitian about ways to increase your calories.

Nutritional supplements may be appropriate for some people.

You may find that you tolerate small frequent meals and snacks better than a few larger meals.

Why am I gaining weight?
There are calories in your dialysis solutions as well as in your food. Unwanted weight gain may happen over time. Talk to your dietitian if you are gaining too much weight.

Being active will help you feel better and help prevent unwanted weight gain. Check with your doctor before increasing your activity.

Can I drink alcohol?
You will need to check with your doctor first.

If you drink alcohol, keep in mind that it counts as part of your total fluid for the day. Wine is high in potassium and beer is high in phosphorus. If you use mixes for hard alcohol, avoid those high in phosphorus.

Why am I constipated?
Constipation is a common problem due to phosphorus binders, fluid restrictions, and less fibre in your diet. Take your stool softeners as prescribed. Talk to your dietitian about the best way to increase fibre in your diet.
